

AI Reflection — Worked Example

Working with AI

Worked example using the amateur dance club app from Lecture 04 ("A more detailed example"). Your project will be different; use this to see the level of detail expected.

Group #	Example		Project Topic		Amateur Dance Club App	
Team Member Names	Ana	Ben	Chen	Dev		
Submission	☒ Requirements Breakdown ☐ Product Backlog ☐ Sprint Backlog					
AI tool(s) used: Model + Version + Effort	Opus 5.5 Medium, GPT-5.6 Sol High					

About this reflection

This lab is a first step toward AI-driven development (AI-DD). The focus is still Agile, but for the Requirements Breakdown, Product Backlog and Sprint Backlog you will also work with AI, and then reflect on how it went. The goal is to learn what AI does well and where it falls short. Your answers also help shape how future labs use AI.

STEPS: How to work

1. **Without AI:** brainstorm and work on the submission as a group.
2. **With AI:** ask AI to do the same work.
3. **Decide together:** compare the two and decide what goes into your submission: your ideas, AI's, or a mix.
4. **Reflect:** answer the questions below and submit this reflection with your submission.

What to submit

- **Group:** choose 2 questions and answer them as a team, at least 30 words each.
- Use a specific example from this submission, and say which AI tool(s) you used above.

1. Questions (choose 2)

1. **What AI did better:** What did AI do better or faster than you? Give one specific example from this submission.
2. **What AI got wrong:** Describe one AI output you rejected or corrected, and why.
3. **Yours vs. AI's:** Compare one item you wrote without AI with the same kind of item written by AI (e.g., an epic, user story, acceptance criterion or task). Which is better, and why?
4. **Checking with class concepts:** Use one concept from class (e.g., INVEST, conditions of satisfaction, Definition of Done, tasks of one day or less) to judge an AI output. Did it pass? What did you change?
5. **What you knew:** What did you know that AI didn't (e.g., your users, personas or project)? How did that change the final result?
6. **Missed ideas:** Did AI suggest something you missed while brainstorming without AI? Did you keep it? Why or why not?
7. **Deciding:** How did your team decide between your ideas and AI's? Was there disagreement, and how did you settle it?

8. **Surprises:** What surprised you most about AI's output, positively or negatively? Give an example.
9. **Asking AI:** What did you have to change in how you asked AI (your prompt) to get a useful answer? What worked?
10. **Next time:** What will you do differently when using AI on the next submission, and why?

2. Your Answers

Question #	Answer <i>At least 30 words. Use a specific example from this submission.</i>
3	Our story "As a treasurer: record which members attended each practice so that I know who owes for that session" was better than AI's version. AI added "using a searchable list on a mobile app", which is technical detail. A user story should be in the customer's language, so we kept ours.
6	While brainstorming without AI, we only wrote stories for the treasurer and members. AI suggested a story for the coach to see how many practices she will be paid for. We kept it because Maya, our coach persona, needs to be paid correctly.

Group example: 2 questions answered as a team.
