

Product Backlog — Worked Example

Worked example using the amateur dance club app from Lecture 04 ("A more detailed example"). Your project will be different; use this to see the level of detail expected.

Group #	Example	Project Topic	Amateur Dance Club App	
Team Member Names	Ana	Ben	Chen	Dev

About this template

The Product Backlog is the list of all product features (requirements) that need to be implemented. Each Product Backlog Item specifies the what more than the how.

How to work with AI

- **Without AI:** brainstorm and complete this document yourselves first.
- **With AI:** ask AI to do the same work.
- **Decide together:** compare the two and decide what goes into this submission: your ideas, AI's, or a mix.
- **Reflect:** complete the AI Reflection and submit it with this document.

What to submit

- Every User Story from your Requirements Breakdown, each with Acceptance Criteria, a Priority and an Estimate.
- Your team's Definition of Done.

Guidance: filling in the columns

- **Acceptance Criteria:** the conditions of satisfaction for this one item: what must be true for this story to be accepted.
- **Definition of Done:** an agreed-upon set of things that must be true before any item is considered complete. It applies to all items; acceptance criteria are specific to one item.
- **Priority:** assigned by the customer. Use three levels: Must-have / Good to have but I can wait / Nice to have.
- **Estimate:** assigned by the developers, and must include everything needed to get the item to "done". Your team may choose any one of the scales taught in class. Tick it in Section 1 and use it for every item:
 - Story points (relative): 0.5, 1, 2, 3, 5, 8, 13, 20
 - Effort levels 1-5 = 0.5, 1, 2, 4, 8 person-days

1. Estimation scale used

☒ Story points ☐ Effort levels (1-5)

2. Definition of Done

1	The code has been either pair programmed or code inspected by another team member.
2	The acceptance criteria have been tested and pass.

3. Product Backlog Items

Story ID	Parent Epic / Feature	User Story	Acceptance Criteria <i>Conditions of satisfaction for this item</i>	Priority <i>Must-have / Good to have / Nice to have</i>	Estimate
US-1.2	E1 / Record attendance	As a treasurer: record which members attended each practice so that I know who owes for that session	- Treasurer can check off each member present at the current practice - Attendance is saved and can be viewed for past practices - A member marked present who hasn't paid shows as owing \$10	Must-have	3
US-1.1	E1 / Manage the practice schedule	As a treasurer: add and remove practice sessions so that members always see the current schedule	- Treasurer can add a practice (date, time) and it appears in the schedule - A removed practice no longer appears in the schedule - Only the treasurer can add or remove practices	Must-have	2
US-2.2	E2 / Track club finances	As a treasurer: see each member's balance so that I know who still owes money	- Balance = payments – (practices attended × \$10) - Members who owe money are highlighted	Must-have	3
US-2.1	E2 / Pay for practices	As a member: pay for up to one month of practices in advance so that I don't have to pay each time	- Member can pay for 1–4 upcoming practices at once - Prepaid practices are deducted automatically when attendance is recorded	Good to have	5
US-3.1	E3 / Receive reminders	As a member: get a reminder before each practice, regular or ad hoc, so that I don't miss it	- Members get a reminder 24 hours before each practice - Ad hoc practices added later also send a reminder	Nice to have	2

The example shows 5 of the 9 stories to illustrate the format; your Product Backlog lists every story from your Requirements Breakdown.
